BULBS

Spring flowering bulbs from the Puyallup Valley, the Bulb Capital of America. The home of the spectacular "Daffodil Parade" and the gorgeous fields of tulips which you have seen featured in national magazines.

Daffodils

DAFFODIL CULTURE

Daffodils thrive in any well-drained garden soil. They should be planted about 10

in. deep for the large bulbs, but the varieties which make small bulbs of course should not go in quite so deep. The soil

should be prepared 6 in. below the bulbs—mix bone meal into the soil, but do not let any manure come in contact with the bulbs.

Daffodils look best planted in groups or drifts, with the bulbs placed 4 to 6 inches apart. They should be planted in early September and in cold climates a mulch of leaves or straw after the ground has frozen is a good protection. The bulbs should be dug and divided every 2 or 3 years; dig the bulbs when the foliage is turning yellow, and lay on the ground. They may be replanted at once, or kept in storage until fall. Do not dig them in the fall.

Daffodils used for naturalizing in the grass or under trees need not be disturbed for years.

Do not water daffodils in the **summer** when they are dormant.

Varieties listed here are numbered (1 to 6) according to their time of blooming.

Tulips

TULIP CULTURE

Tulips should be planted during October or early November in most parts of the country. In the south best results are obtained by placing the bulbs in the home refrigerator, food storage compartment (not freezing) for 6 weeks and planting them early in December.

Good drainage is essential and a sunny location is best, though tulips will bloom in partial shade. It has been recommended to plant bulbs about 5 in. deep, but it is becoming more popular to plant about 9 or 10 in. deep. The bulbs will not split so much and for this reason better blooms will be produced for several years.

Prepare the soil about 6 in. below the bulbs using bone meal as fertilizer. While moles rarely molest the bulbs if planted this deep, mixing benzene hexachloride in the soil around the bulbs is a good precaution.

Our tulip prices are all for the extra large (12 cm. and up) bulbs. They will give you wonderful blooms.

EARLY FLOWERING TULIPS

These early tulips come in single and double, and are about 8 or 10 inches high. They are fine for border planting, and for pots, or window boxes, and are also used for rock gardens. The doubles are very showy, and resemble double roses.
